Assembly

When photos are used in your documentation process, whether for inspections, quality assurance, or proof of condition, it's essential to keep all the photos organized in one place, and easy to retrieve and manage.

PhotoTag is a cloud-based software solution that helps you categorize photos as you are taking them, making them much easier to find later. It allows you to tag photos with barcode numbers, NFC tags, and user-defined categories. The photos are then automatically uploaded to the cloud, where they are stored securely. Once photos are stored in the cloud, they can be easily retrieved by selecting tags in our web application, Android, or iOS app or via our REST API.

Features

- Easy-to-use mobile app
- Automatic GPS and date tagging
- Easily searchable image catalog
- Customizable categories
- Associate barcode or NFC data with photos
- Supports integrated barcode scanners on rugged Android devices

PhotoTag Solutions

Freight Claims. Use PhotoTag to scan barcodes of the order number, pallet label or other barcode or NFC tag. Then, capture pictures of the freight as it is wrapped, staged, or loaded on trucks. As incorrect, damaged or missing freight is discovered, your customer service team can easily look up the photos and send them to a customer or logistics company.

Manufacturing. It is important to capture photos of manufacturing work in process, especially when your team detects defects or other anomalies, without slowing down. PhotoTag allows you to quickly scan a barcode, such as a work order, and capture images of products or assemblies. Photos are automatically uploaded to the cloud for review and corrective action.

Inspections and Progress Tracking. Maintaining an organized history of photos can be time consuming. PhotoTag does the organizing for you! Read an NFC tag or barcode on an inspection point or location. Capture pictures of the current condition of the items. Over time, you can see the sorted, organized changes to each item.

Features and Benefits

Features	Benefits
Easy-to-use mobile app	PhotoTag can be used by anyone authorized to take photos due to its user-friendly interface
Automatic GPS and date tagging	No need to manually tag a photo with the date or location, since PhotoTag does this automatically. Use the GPS and tag information to quickly map photo locations (CSV download for Google MyMaps)
Easily searchable image catalog	Photos taken by different devices and people are stored in one location, making them easy to find.
Customizable categories	Categories can be applied to multiple photos without having to manually choose a category before taking each photo.
Photos are uploaded and stored securely	Photos are automatically synchronized, so you don't need to manually upload photos.
Download photos with ease in a zip file	Quickly share photos with customers or partners, or archive locally
