TallyFlow Asset Tracking System

Reduce time and material waste. Improve productivity, safety, and profitability.

Reduce time and material waste by using asset tracking to find your inventory, tools, or containers. Track items in real-time, minimizing losses and saving time spent looking for or replacing missing items. Measure time intervals and locate bottlenecks by receiving data on the status and movement of your assets.

Our TallyFlow tracking solution is designed to fit a range of budgets, with a focus on value. TallyFlow is scalable, so it can start small and grow with your business.

How Does Asset Tracking Work?

Attach RFID tags or barcodes to the items you want to track. Then, configure readers and antennas in zones. TallyFlow will identify, timestamp, and track which item is in which zone.

Solutions

- **Asset Tracking**. Easily track and locate your assets from our dashboard or using our TallyFlow Mobile application. Whether tracking work in process or the general location of your assets, TallyFlow can help your production or storage run smoothly.

- **Manufacturing & Distribution Tracking**. A common problem in manufacturing and distribution is lost or stale material. TallyFlow and TallyFlow mobile gives you insight on the location of your assets or inventory and can be used with RFID to find lost assets.

- **Check in / out**. TallyFlow can be configured to help you track your tools or other equipment. Using different zones, you can see where your tools are located in an instant. Get notifications if your equipment has been checked out too long.

Features and Benefits

Features	Benefits
Cloud-based solution	Access your data from remote locations or across multiple sites and scale to large amounts of data or several sites
Encrypted (TLS) communications	Your data is send and stored securely on Google Cloud Platform servers
Intelligent "edge" data collection	Lower cost through data processing at the edge with less Internet traffic
RFID zones	Provides location information, time data (e.g. time-in-zone), organization for reporting, and notifications
Integrated photo tagging	Organizes your photos based on barcodes or RFID tags, and shows location and condition history of tagged items
TallyFlow Mobile application	Use a mobile device to enroll, move, and location assets.
Remote configuration	IT resources do not need to be deployed to configure the devices
Remote management	Software can be updated remotely to add features or fix problems; debugging can occur remotely
Easy-to-use REST API	Integrate RFID into your own solutions

Installation

TallyFlow is a cloud-based solution requiring minimal setup time and configuration. Start tracking your items or personnel with no customization required. Cloud software scales easily from very small installations to large facilities.

Pricing and Support

Since pricing varies depending on the project, please call us so we can discuss your budget and hardware needs. RFID tracking starts at $100/mo.

Our support team is available from 8-5pm Eastern at +1-724-452-9366 and by email at support@sdgsystems.com. We offer training for your local team to equip them to resolve most problems that you may experience.
